

Automation Studio Build

**Agile creation of operational solutions,
instead of depending on traditional development**

Building solutions powered by Automates

Reliability

Enables the continuous building and execution of operational solutions through Automates that configure and run processes, data, and interfaces.

Control

Allows you to define and manage data privacy operations, with full traceability, multi-level approvals, and auditable evidence.

Scalability

Enables the expansion of solution creation through Configware, providing new operational capabilities without relying on traditional development.

When solutions depend on development, operations lose speed

In environments where organizations need to automate processes or build internal solutions, they often rely on traditional development or isolated tools that make execution difficult.

This slows down the creation and modification of solutions, affecting the implementation of processes, data management, and adaptation to business changes.

The result is slow operations, with high technical dependency, limited flexibility, and difficulty scaling solutions continuously.

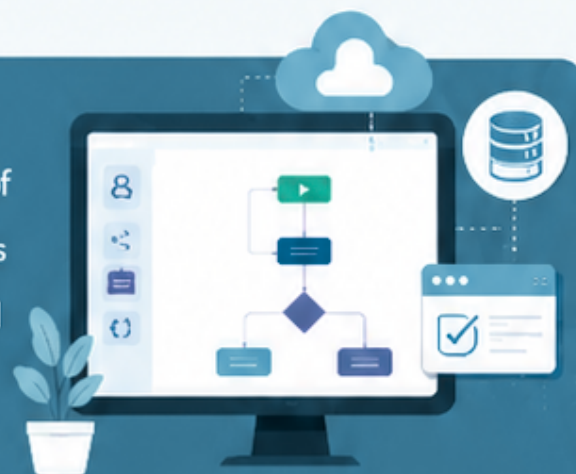

What is Automation Studio Build

MasterBase® Automation Studio Build is an operating capability based on Configware that allows you to create automated solutions through the configuration of processes, databases, and operational interfaces.

MasterBase® Automation Studio Build enables the creation of Configware-based solutions as a continuous process that allows you to digitize processes, structure data, and enable operational interfaces without depending on traditional development.

Key Benefits

-  **Reduced dependency** on technical development through Configware and structured configuration
-  **Faster** creation and implementation of automated processes
-  **Improved traceability and control**, thanks to the structuring of processes and data
-  **Continuous adaptation** of solutions, with configurable changes and no need for reprogramming
-  **Greater operational execution capacity**, without extensive development projects

Use Cases

- 
Operations — Backoffice — Process and repetitive task automation
- 
Enterprises — Digitalization — Process transformation, from message sending and control in spreadsheets to structured workflows
- 
IT — Digital Transformation — Building solutions without traditional development
- 
Enterprises — Management — Forms and approval workflows across areas

Functional Areas

- 
Operations — Automation and efficient execution of internal processes
- 
IT / Digital Transformation — Implementing solutions without traditional development
- 
Backoffice — Reduction of manual tasks and process structuring
- 
Management / Business — Rapid adaptation of processes to operational changes

MasterBase® Automation Studio Build enables the creation of Configware-based solutions that reduce reliance on traditional development and can be executed continuously through Automates, transforming processes into structured, controlled, and adaptable solutions.

Key Features

Configuration of automated processes

Management of databases and information structures

Creation of operational interfaces (forms)

Workflows and approval processes

Integration with multiple systems

Modular solution building

Continuous adaptation without redevelopment

No-code / low-code approach based on configuration

Who We Are

MasterBase® OU is an automation factory that runs processes, from individual tasks to essential systems that support your organization.

Through intelligent Automatis, we transform business operations, optimizing tasks to expand execution capacity. Our systems automate complete processes, operate continuously, under control and with reliability, enabling you to scale without depending on human effort.

We develop our Automat i's and use them for our own operations.

Presence and Journey

MasterBase® has more than two decades of experience supporting thousands of companies in a variety of sectors — banking, healthcare, insurance, retail, international organizations, and many others.

With an international presence in Europe and America and headquarters in Estonia, a member of the European Union, we are a global benchmark in digital innovation and e-government.

With thousands of millions of executions of automated processes, we provide mission-critical operations at a large scale with continuity, efficiency, security, and high availability.
