

IAM Security Events

Continuous evidence about
the identity and access within
your organization.

Why is this system important?

An internal account accesses sensitive information outside the usual pattern.

-  Who accessed it?
-  When and from where?
-  Was it legitimate?
-  What evidence exists?

Before we can respond, we need to reconstruct the event.

The problem with working with scattered information

THE ORGANIZATION

Difficulty demonstrating compliance and responding to audits.

THE OPERATION

Scattered records and areas without visibility.

THE TEAM

Slow investigation and reliance on manual reconstruction.

Lack of visibility affects daily operations.

When there is no evidence, the risk increases.

LATE DETECTION

Unauthorized access
can go unnoticed.

INCOMPLETE INVESTIGATION

Critical context may
be missing to reconstruct
what happened.

NON-DEMONSTRABLE CONTROL

The organization may not
be able to support its response
to audits, incidents
or disputes.

The risk is not just technical: it's operational, regulatory and evidentiary.

What is IAM Security Events?

IAM Security Events is an Essential System that transforms identity and access events into verifiable evidence.

Each event is incorporated into a structured history for monitoring, investigation, auditing and compliance.

Complements your existing IAM.

It does not replace it. It complements it by capturing and preserving identity and access evidence.

How does it work?

Examples of IAM events that are ingested

 Authentications and authorizations

 User activity

 Access to resources

 Failed attempts and blocks

1

RECEPTION OF IAM EVENTS

Authentications, authorizations, accesses, activity, failed attempts and blocks.

**2**

REGISTRATION AND CENTRALIZATION

Structured storage and secure retention.

**3**

PRESERVATION

Traceable history and verifiable evidence.

Verifiable evidence and a ready-to-use repository for audits, investigations and compliance.

Every registered event becomes **usable evidence**.

What operational capability does it strengthen?

CATEGORY: **CONTROL**

IAM Security Events strengthens an organization's ability to maintain **control, traceability and verifiable evidence** of identity and access events.

It turns scattered activity into **organized evidence** to analyze, investigate and demonstrate what happened.

Maintain **control, traceability and verifiable evidence** of identity and access events.

Automations in action

IAM EVENT CAPTURE

Continuously receive identity and access events from integrated systems.

ANALYSIS AND RETENTION

Centralize, structure and analyze patterns with configurable retention.

ALERTS AND TRACEABILITY

Generate alerts and preserve verifiable evidence.

Reduce dependence on manual reviews and reconstructions.

Key use cases and areas that leverage the evidence.

Operational value and results

Greater visibility, more control and a stronger response capability.

Early detection of anomalies

Increased capability to detect and investigate unauthorized or anomalous access.

Traceability of identity and access events

Complete and centralized record that allows reconstructing what happened, when and who performed the action.

Verifiable evidence

Complete, reliable evidence ready for audits, reviews and regulatory compliance.

Greater capability to detect and investigate unauthorized or anomalous access

More information to act quickly and reduce risks in the organization.

Evidence or reconstruction?

When you need to investigate an access, will you have evidence or will you have to reconstruct what happened?

IAM Security Events turns identity and access events into **evidence** to demonstrate, investigate and defend control.

About Us

MasterBase® OÜ is an automation factory that executes processes, from individual tasks to Essential Systems that support your organization.

Through intelligent Automata, we transform business operations by moving beyond task optimization to expand execution capacity. Our systems automate end-to-end processes, operate continuously with control and reliability, and enable organizations to scale without depending on human effort.

We develop our own Automata and use them to run our own operations.

Presence and track record

MasterBase® has more than two decades of experience supporting thousands of organizations across a wide range of industries—including banking, healthcare, insurance, retail, international organizations, and many others.

With an international presence across Europe and the Americas, and headquarters in Estonia—a member of the European Union and a global leader in digital innovation and e-government.

With billions of automated process executions, we deliver mission-critical operations at scale with continuity, efficiency, security, and high availability.
